

SWAG LABS — MANUAL SOFTWARE TESTING REPORT

Project: Swag Labs Manual Testing

Application: <https://www.saucedemo.com/>

Testing Type: Manual Functional Testing

Test Management Tool: Qase

Test Environment: Web browser

Test Cycle: Login Functionality — Run 1

1. Project Overview

The purpose of this project was to evaluate the login functionality of the Swag Labs demonstration application. Testing focused on verifying successful authentication, rejection of invalid credentials, and validation of missing login information. Test cases were documented and executed manually using Qase.

2. Scope of Testing

The following scenarios were tested:

- Login using valid credentials.
- Login using an incorrect password.
- Login with both username and password empty.
- Login with a valid username but no password.
- Login using an unregistered username.

3. Test Execution Summary

Total test cases: 5

Passed: 5

Failed: 0

Blocked: 0

Untested: 0

Pass rate: 100%

These figures represent the recorded Qase results and should be retained only if all five cases were executed and their actual results matched the expected results.

4. Test Results

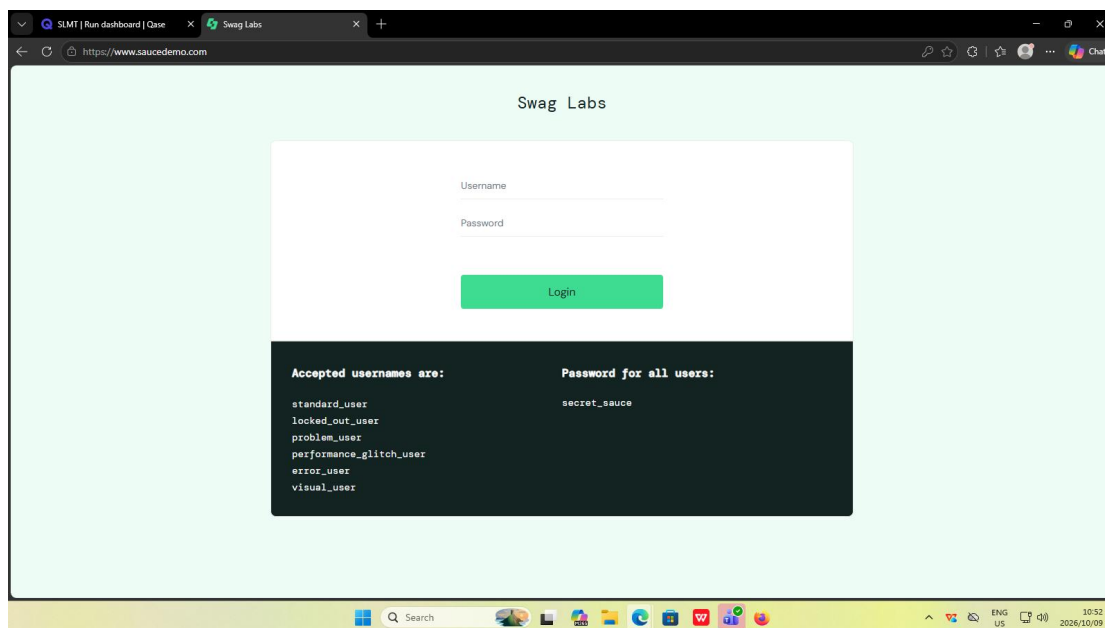

Test ID	Test Scenario	Result
TC01	Login with valid credentials	Passed
TC02	Login with incorrect password	Passed
TC03	Submit login with both fields empty	Passed
TC04	Submit login without a password	Passed
TC05	Login with an unregistered username	Passed

5. Testing Approach

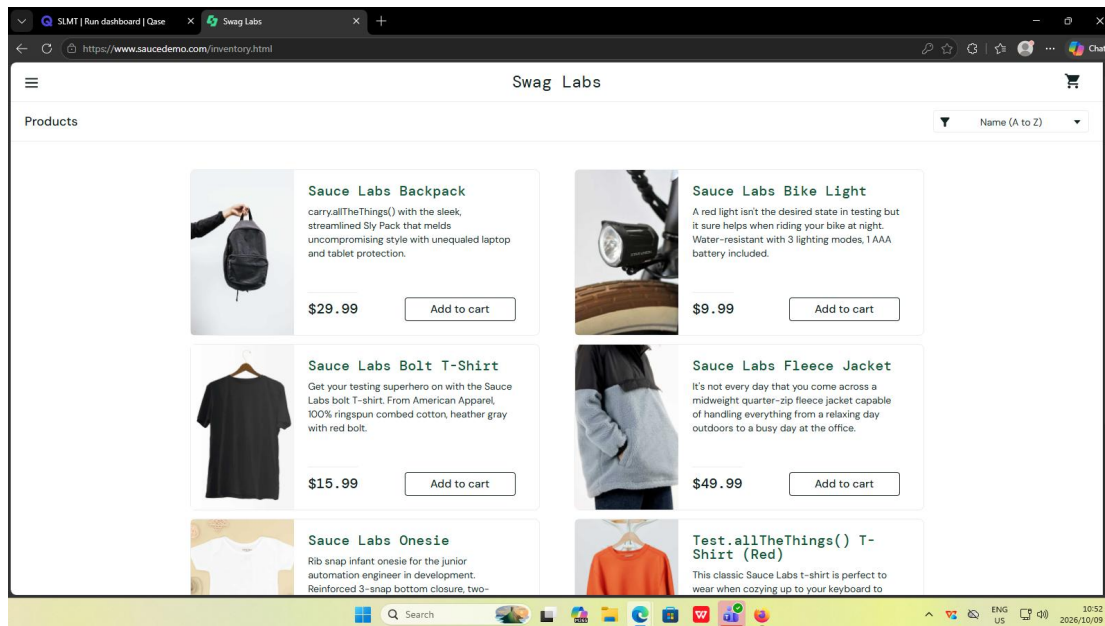

Each test case was executed manually by following documented steps. The observed application behaviour was compared against the expected result, and a status was recorded in Qase.

Screenshots were captured to provide supporting evidence of test execution.

6. Conclusion

The five recorded login test cases passed during this test cycle. The observed results matched the expected behaviour for the tested login scenarios.

This exercise provided practical experience in test case documentation, manual test execution, result recording, and test reporting.

7. Tools Used

- **Swag Labs** — demonstration application

- **Qase** — test case management and execution tracking
- **Web browser** — application testing and screenshot capture
